FaceID  
C.Product

### **Internal Credit Rating System** **T.Scoring**

T-Scoring is a solution to rate credit and management of loans in a focused way.

The system is built to solve the problem of credit assessment of customers according to Basel II and meet the requirements of the State Bank for risk management

### **Pricing And Asset Management System T-collate** **T-Collate**

The system assists banks and credit institutions in the management of valuation/re-valuation of collateral assets quickly and effectively. Create database warehouse for price assets, comparative assets

### **Credit Card Underwriting System** **T.Credit**

The system centralizes the credit card issuance process, automatically scores customer profiles, proposes the line of credit be granted, checks duplicates and manages blacklists.

At the same time, the system also supports users to save processing time, minimize operational errors, provide data for relevant departments and connect to provide data for Way4 card management system, Card pro

### **Foreign Exchange Transaction Management Solution** **FX Trading**

FX Trading is a foreign currency trading system directly between customers and banks or through branches/transaction offices to transact with the Head Office.

The system allows management throughout from online updating of foreign currency buying/selling rates to unifying foreign currency trading transactions.

### Real Estate Business and Management System FACILITY MANAGEMENT (FM)

Establishing a facility - infrastructure information management system centralizing in two main areas: space and infrastructure (in addition to supporting people, organization or capital management) improve the efficiency of using, exploiting and managing invested assets, improving labor efficiency, minimizing risks and shortcomings in processes and laws in asset management

### Smart system for complex (Smart building) and urban areas (Smart City)

Providing a comprehensive solution to address the operational needs of a smart urban-industrial park, optimizing and proactively managing real estate, infrastructure, capital, supplies, and other assets. This approach aims to enhance professionalism in each department of the management unit, limit risks and incidents, and ultimately extend the useful life of assets

### Smart hotel room management and control system sRMS

Hotel room management system RMS (Room Management System) is a smart hotel room control management system developed and mastered the technology by TNTech.

The system has the function of turning on and off the devices in the room such as lights, curtains, air conditioners, etc., automatically or via the application installed on the customer's Mobile.

Choose the "mode" of the room according to your personal mood to work, relax, watch movies or have an exciting party, etc. to increase the customers experience when using services at the Hotel.

### Smart Industrial Park Solutions T.SIE

T.SIE (TNTech Smart Industrial Ecosystem) is developed by TNTech as an integrated solution combining technology, infrastructure, and smart services to enhance the quality and operational efficiency of industrial parks. The system employs advanced technologies to optimize operations across security, environment, wastewater treatment, traffic, and energy management. It creates a sustainable, convenient, and safe working environment for clients while promoting sustainable economic and social development.

### Asset Management

Asset and tools management are indispensable needs of every business, in order to strictly manage the use, procurement, investment and efficient exploitation of existing assets. With business models owning large scale management hierarchy system, the application of technology to asset and tools management is the most effective trend today

### Smart Hotel Solution T.SH5

An innovative & intelligent management system developed for hotels, based on IOT technology, provides intelligent, scientific interactive experiences, behind-the-scenes management, community accounts and user applications, etc., all integrated with the hotel's overall management platform in a unified way. The system helps to improve hotel service quality and online booking rate.

### Facial Recognition Time Attendance FaceID

The facial recognition time attendance solution is considered to be the optimal way of tracking time attendance during the pandemic, limiting physical contact, ensuring a safe distance for employees when performing time attendance. In addition, the solution also catches up with the 4.0 technology trend, which can be widely and long-term applied to businesses.

### Customer Experience Optimization and Management Solution – C.Product

C.Product is an integrated platform combining CDP, CRM, and CXM capabilities. The solution enables businesses to manage the entire customer journey before, during, and after the sale. It supports identifying potential customers, distributing sales opportunities, tracking progress and KPIs, as well as listening and responding at every touchpoint. This helps enhance customer experience and improve conversion efficiency.
